

## CONVERSION INSTRUCTIONS FOR OLDER SPAS!

---

This conversion takes (5) days. This product works well in removing past chemical build-up in spas equipment and lines. This water will have a higher concentration of chemicals used in the past and **the spa should not be used during this time**. Please read instructions completely before starting. This (5) day process is designed to clean away contaminants already present deep within spa plumbing, fittings and equipment. You may use the PENETRATING SPA CLEANSER in your existing water, regardless of how old the water is or what chemicals have been used in the past. This is a good time to fully inspect your cover for any tears, which will allow contaminated water to drip back into your spa water. If your cover has any rips or tears we would highly recommend purchasing a new one. Also a cover lift is a good way to preserve your cover and make your spa experience more enjoyable.

- 1- Remove filter(s) & leave out during this 5-day cleansing cycle.
- 2- Add 1-full bottle of PENETRATING SPA CLEANSER into existing water, be sure all jets are open. 2-bottles are needed if spa is over 5-years old.
- 3- Maintain temperature at 90° degrees or higher & run filtration for a minimum of (6-8) hrs per day.
- 4- After 5-days turn off breaker & drain.
- 5- Clean under headrests & bottom of cover with a small amount of household bleach & water. The all natural FILTER-SOAK or PENETRATING SPA CLEANSER may also be used (1-capful to 1-cup of warm water).
- 6- 'Back Flush' by shutting off spa drain, put garden hose into the filter area, & fill until bottom area of spa is full. Rinse thoroughly & drain this water out.
- 7- Put clean or new filter(s) back in, turn breaker on, & refill your spa using a garden hose **PRE-FILTER**.
- 8- Add 1-oz for up to 500 gallon spas / 1/2 -oz for up to 250 gallon spas of spa chlorine granules (99% sodium dichlor).
- 9- After temperature reaches 90° degrees add the all natural WATER TREATMENT & CONDITIONER. (½-bottle for spas up to 250 gallons & 1-full bottle for spas up to 500 gallons.)
- 10- Run pumps on high with all jets open for 5-minutes & enjoy. Check your water with a reliable test strip the next day, and only adjust if necessary.
- 11- Add recommended amount of the WATER TREATMENT & CONDITIONER every 3-months.
- 12- Important: Always leave all jets including neck jets, waterfalls, etc.. open slightly when spa is not in use, this will allow our enzymes to circulate fully within the spa. Shocking once a week is recommended.**

---

These chemical guidelines are to help maintain proper water chemistry in your spa. Please keep in mind that all spa water is different based upon water source and frequency of use. If you are not using a pre-filter have your water tested by your local dealer to determine what, if any, additional chemicals are needed. For residential use only. Use as directed. The purchaser assumes all liability and responsibility while using this product. Do not take internally. Keep out of reach of children. Use in conjunction with an EPA registered chlorine. Spa Chlorine Granules (99% Sodium Dichlor) is highly recommended.
